

Global Address Master™ Download Instructions

Select Version

If you know you have Microsoft Access 2007, you can download the smaller version, Global_Address_Master_No_Runtime.zip.

Otherwise, I recommend that you download the complete version, Global_Address_Master_With_Runtime.zip. If you choose the complete version, a run-time version of Microsoft Access will be installed on your computer. A run-time version is one you can use free of charge, courtesy of Microsoft, for the purpose of running programs such as Global Address Master™.

Setup

Unzip Global_Address_Master_With_Runtime.zip or Global_Address_Master_No_Runtime.zip (whichever you chose) to a folder of your choice, such as C:\Downloads, for example.

When done, you should be viewing the folder that was created, Global_Address_Master_No_Runtime or Global_Address_Master_With_Runtime. Open the folder beneath, also having the same name. Now you should see a file named "setup.exe"; double-click that.

A wizard will take you through the setup process.
